

Group Environmental Policy

Camira aims to demonstrate environmental best practice across all business activities by operating to the highest environmental standards and continuing to be leaders in a pioneering, design led, sustainable textile industry.

Environmental considerations are embedded in Camira's culture. We will minimise our environmental impacts and protect the environment by committing to:

- Continually develop and refine the group business management system to ensure all operational sites, departments and people are working in conformance with the requirements of BS EN ISO 14001.
- Determine environmental statutory and regulatory compliance obligations, implementing actions to address and routinely verify their effectiveness.
- Ensure pollution of the environment is prevented during operational activities.
- Consider environmental impacts when making business investment decisions.
- Evaluate the life cycle impact of new products, from design and development to manufacture and end of life.
- Seek to minimise and reduce manufacturing waste and prioritise re-use, recycling, and recovery respectively.
- Focus efforts on implementing a net-zero business model across our supply chain and targeted reduction of scope 1, 2 & 3 emissions.
- Recognise that making positive contributions to local and international communities is an important social responsibility.
- Engage and collaborate with internal and external stakeholders to encourage awareness of environmental requirements and their contribution to continual improvement.
- Set measurable objectives which are monitored and reviewed in line with the principles of this environmental policy.
